

About BGI Group

BGI was founded when four Chinese scientists decided to participate in the International Human Genome Project in the 1990s. The company went from sequencing 1% of the human genome to today holding half the world's genetic sequencing capacity. As well as its core genomics business, it operates China's national gene bank and has businesses in education, blockchain and life sciences technology. It operates in over 100 countries and during the Covid-19 pandemic it distributed its testing kits to more than 80 countries.

A note on methodology:

- The index for organizations includes companies, government organizations and institutions that appear in three or more documents in the China File. It does not include media organizations.
- The index for people includes individuals that appear in two or more documents in the China File. In general, Chinese individuals are listed starting with their family name.
